Imprivata GroundControl

Simple application access with Enterprise Password AutoFill

Today's healthcare organizations know that mobile solutions can improve care quality and increase operational efficiency. However, it's often a struggle to find the proper balance of security and efficiency to support adoption of these new technologies.

Imprivata understands this balance, because Imprivata understands healthcare.

Imprivata GroundControl Check Out is integrated with Imprivata OneSign® to support Enterprise Password AutoFill for iOS applications. Users can leverage trusted digital identity to streamline mobile application access, saving critical time for clinicians. Through a fast, convenient badge tap at Check Out, users can quickly assign a device and carry credentials into Apple Password AutoFill supported applications to simplify workflows and improve the end user experience.

Imprivata GroundControl offers automated device provisioning, secure device checkout, and fast, secure access. Together, these features drive improved workflow efficiency, security, and auditability, delivering the full potential of shared mobile devices.

SAVE TIME ACCESSING MOBILE APPLICATIONS

With lengthy usernames and complex passwords, now the norm, accessing an application can take more than 30 touches before a user is authenticated. With Imprivata GroundControl, you can reduce those touches to three: simply launch the app, select your credentials, and log in. It's simple, streamlined, and frustration-free.
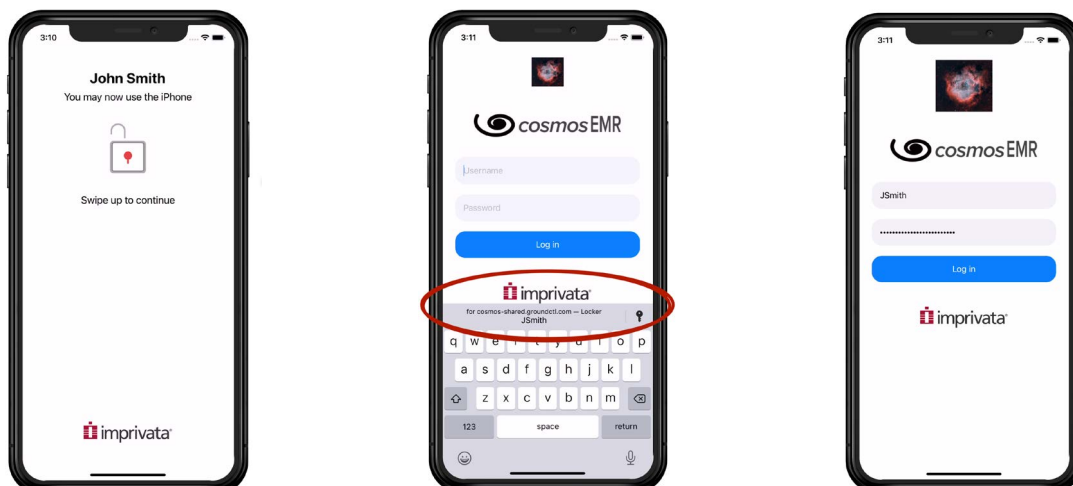

ENFORCE STRONGER SECURITY ON SHARED-USE DEVICES

Imprivata GroundControl Enterprise Password AutoFill enforces two-factor authentication at the time of Check Out to support a stronger security posture on shared-use, enterprise-owned devices. Additionally, with streamlined access to applications, complex passwords and pass phrases are no longer a problem to remember.

IMPROVE ADOPTION OF ENTERPRISE-OWNED DEVICES

Increase user adoption by enabling frictionless access to enterprise- owned devices. With Imprivata GroundControl, organizations can support shared- use environments without creating barriers such as tedious authentication.

REDUCE HELP DESK TICKETS

Password fatigue, driven by complex passwords and frequent authentication can lead to frustrated users and locked-out devices or applications. Streamlining access to mobile applications via the Imprivata GroundControl Enterprise Password AutoFill workflow removes the need for manual authentication, reducing potential IT intervention.

About Imprivata GroundControl

Imprivata GroundControl is a comprehensive, end-to-end mobility solution that helps organizations optimize their mobile strategies. Imprivata GroundControl delivers automated device provisioning, secure device checkout, and fast, secure access for users, helping customers unlock the full potential of shared mobile devices by ensuring a fast, efficient workflow while improving security and auditability.
